

Lego Therapy Group

Play therapy groups focus on building peer interaction and social skills.

These groups support children to practice communication, cooperation and problem-solving in a fun, structured way.

Skills we can practise

- Turn taking
- Sharing
- Waiting
- Problem-solving
- Listening
- Giving and following instructions
- Checking understanding
- Working as a team
- Asking for help and asking questions
- Developing verbal and non-verbal communication

Information Sheet

Introduction

Each group can include a builder, supplier and engineer.

Depending on the number of children, extra roles such as director or observer can be added.

An adult helps the group stay on track, supports positive interactions and helps children find compromises.

How it works

- 1 Choose the builder, engineer and supplier.
- 2 The engineer looks at the picture instructions and tells the supplier which pieces are needed.
- 3 The supplier passes the pieces to the builder.
- 4 The engineer tells the builder where the pieces go.
- 5 Swap roles and make time to play with the finished model.

Build together.
